INTRODUCTION.

The foundation of the Medical Library of Pennsylvania Hospital dates as far back as the year 1763. The first medical book possessed by the Hospital appears to have been a gift from that warm friend and generous benefactor of the Institution, Dr. John Fothergill, and consisted of *An Experimental History of the Materia Medica, by Wm. Lewis, F. R. S., Lond.* 1761, presented, as the record says, in 1762, "for the benefit of the young students in physic, who may attend under the direction of the physicians." The idea of establishing a Medical Library, in connection with the Institution, having been thus probably suggested to the officers of the house, it was carried into execution the next year. As the number of students, attracted to the Hospital by its reputation as a school for clinical medicine and surgery, had already, at that early period of its existence, become of some moment, the Board of Managers resolved to demand a fee from them for the privilege of attending the wards of the house, and consulted with the physicians in regard to the destination of the sum thus raised. These gentlemen (Thos. Bond, Thos. Cadwalader, Phineas Bond, and Cadwalader Evans), although having claim upon such gratuities according to the custom of the British Hospitals, full of scientific zeal, proposed to apply the money to the foundation of a Medical Library for the advantage of the pupils of the Institution. Considerable donations by friends of the Hospital soon formed a substantial nucleus for the contemplated collection of medical works. In January, 1767, Hugh Roberts and Samuel Neave, executors of Dr. Lloyd Zachary, with the concurrence of the residuary legatees, presented from the doctor's library 43 volumes of medical works; and in the same year were also presented by Deborah Morris, the medical books of her late brother, Dr. Benjamin Morris, consisting

of 55 volumes, principally standard works collected by Dr. Morris during his residence in the University of Leyden. Another donation of books, to the value of one hundred pounds, was received, in the year 1774, from Mr. Wm. Strahan, of London.

The collection of books thus gained was steadily increased by judicious purchases of works out of the library fund, the only interruption occurring during the time of the Revolution, when the lowness of the funds of the Institution made important additions to the Library impracticable.

The first Catalogue was published in the year 1790, and contained 21 folio vols., 77 quarto, 341 octavo, and 89 duodecimo—total 528 vols. In the same year, the Managers opened a correspondence with the celebrated Dr. Lettsom, requesting him to make such selections of books for the Library as he thought proper. This confidence was not misplaced; Lettsom continued a firm friend to the Institution during his life, and the Library is much indebted to him, as well for the presents with which he occasionally enriched the collection, as the judicious manner in which he discharged the trust reposed in him.

A valuable present of books was received in the year 1800 from Sarah Zane, a wealthy maiden lady, who inherited an extensive and valuable library, the medical portion of which she bestowed upon the Hospital. Her donation comprised 23 folios, 91 quartos, 6 octavos, and 22 duodecimos; in all 142 volumes, some of them very rare, at least in this country.

The increasing number of the students who attended the practice of the Hospital, now afforded an ample fund for the steady increase of the Library; how faithfully it was applied may be seen by a comparison of the Catalogue published in 1806 with its predecessor of 1790, and the additional part printed in 1793. The prosperity of the library fund continued uninterrupted many years, during which a surplus accumulated, and large sums were occasionally granted from it for the general purposes of the charity, or such particular objects as appeared to require a special appropriation.

The principal object of the gentlemen who have administered the concerns of the Library, has always been the acquisition of books strictly medical; yet as the different branches of natural history assume the rank of collateral sciences, treatises upon them have never been considered foreign to the design of the founda-

tion. On the decease of Dr. Benjamin S. Barton, late professor of Materia Medica and Botany in the University of Pennsylvania, his extensive and rare collection of works on natural history was purchased of his widow at the price of $2,770.

Shortly after this important accession, a supplement, or second part of the Catalogue, was published, comprising all the works added to the Library from 1806 to 1818. It is worthy of remark, that during this period, and for some time afterwards, the Library was largely benefited by the praiseworthy services of Dr. Thos. Parke and Mr. Samuel Coates, who, during a long life passed in connection with this Hospital, never ceased to devote their time and talents, in a paramount degree, to the concerns of the Institution.

To the year 1829, the Library had grown to such a degree, that another edition of the Catalogue was considered necessary. This was compiled by Mr. Wm. G. Malin, then librarian of the Institution, and embodied all the former catalogues. Eight years afterwards, in 1837, a supplement to the same was published, the Library consisting then of 7,300 volumes. Since that time, the average number of volumes, yearly added to the Library, has been 160, so that it contains at present 10,500 volumes, and is considered now one of the best, if not the best, collection of medical works in this country. The perusal of its Catalogue will show that it is a fair representative of medical standard literature, particularly in its English and French part, a result greatly owing to the interest taken in the choice and purchase of works by Mr. Malin, the former librarian and present steward of the Hospital, and by some of the medical officers of the House.

The present Catalogue is an entirely new work, and has been compiled independently of its predecessors. For the old plan of disposing the works in the alphabetical order of the names of their authors, a classified arrangement according to subjects has been substituted. The advantages of a catalogue raisonné are so evident, that it is hardly necessary to particularize them. Not only the student who is anxious to familiarize himself with the depth and breadth of medical literature, but also the medical writer in his laborious research for authorities which he might consult on the subject of his investigation, will derive material aid from a work of this kind.

For the classification used in the present Catalogue, the compiler is essentially indebted to the Catalogue Raisonné of the Library of the Medical Society of Edinburgh, the arrangement of which has been followed out as far as some difference in the compass and character of the two libraries would permit.

The whole work has been divided into four parts, viz: Medicine, Science, Literature, and Miscellanies. Each part has been subdivided into chapters, the first and most important part containing eight of them, viz: I. Anatomy, including Human and Comparative Anatomy; II. Physiology; III. Materia Medica and Pharmacy, including Hygiene and Therapeutics; IV. General Pathology and Practice of Medicine; V. Surgery; VI. Midwifery, and Diseases of Women and Children; VII. Medical Jurisprudence and Medical Police; and VIII. Medical Literature.

It will be found, that the classification and subclassification of the different chapters coincide, as far as can be in a work of this kind, with those adopted in most systematic works on the different branches of medical and general science. Only in those instances where no scientific ground for classification could be found, the alphabetical arrangement has been had recourse to.

For the disposition of a book, not only its title but also its contents had to be taken into consideration. In order not to separate a work from others contained under a certain subhead, and treating on the same subject, but from different points of view, its relation to the general head had to be sometimes disregarded.

Titles which had to be repeated frequently, were abbreviated in accordance to the head under which they were placed, and by this measure unnecessary incumbrance of the Catalogue was avoided. The space thus gained has been taken advantage of for the quotation of monographs, essays, &c., contained in collective works, or in appendices to larger treatises. These quotations have been necessarily confined to such essays, which either were known to have been published in a separate form, or which, from the nature of their contents or extent, seemed to be of some importance. Some of these points had to be ascertained by the aid of bibliographical works.

The compiler is perfectly aware, that his work cannot claim perfection. With all care and attention mistakes and deficiencies could hardly be avoided. Not only did the whole amount of

tedious manual and intellectual labor rest entirely upon himself, but his work was also frequently interrupted by derangements found in the order in which the books occupy the shelves, and in consequence of the Library being open to public use during the progress of his work.

Should this Catalogue Raisonné serve to increase the usefulness of the Library, and to augment the interest taken in this valuable collection by the medical profession, he will consider himself amply rewarded.

PENNSYLVANIA HOSPITAL, May 1, 1857.

The total number of volumes now contained in the Library, is 10,500, viz:—

Folio	358
Quarto	1,178
Octavo	7,764
Duodecimo, *et infra*,	1,200
	10,500

(The abbreviations indicating the size of the volumes are those in general use, with the exception, perhaps, of the small p, which is used to designate pamphlets.)

NATURAL PHILOSOPHY.

I. GENERAL, ELEMENTARY, AND SYSTEMATIC WORKS.

Adams, 588, O. Lectures on natural and experimental philosophy, considered in its present state of improvement; describing in an easy and familiar manner the principal phenomena of nature. By the late George Adams. 2d edit. with corrections and additions, by William Jones. 5 vols. With plates. Lond. 1799.

Arnott, 1976, O. Elements of physics, or natural philosophy, general and medical, explained independently of technical mathematics. By N. Arnott, M. D. 2 vols. Lond. 1827.

Bacon, 29, F. Francisci Baconi, Baronis de Verulamio, opera omnia. Tomi 4. Londini, 1730.

Bartholomeus, 510, Q. Liber de proprietatibus rerum. Editus a fratre Bartholomeo Anglico, ordinis fratrum minorum. Argentinæ, 1491.

Bayle, 123, D. Tom. I., Problemata physica et medica. Tom. III., Dissertationes physicæ. Auctore Francisco Bayle, M. D. Hagæ-Comitis, 1678.

Bergman, 32, O. Physical and chemical essays. Translated from the Latin of Sir T. Bergman. By E. Cullen, M. D. 3 vols. Lond. 1784 and '91.

Berigardus, 134, Q. Circulus Pisanus Claudii Berigardi, de veteri et peripatetica philosophia, in Aristotelis libros octo physicorum. Editio secunda. Patavii, 1661.

Bird, 2950, O. Elements of natural philosophy; being an experimental introduction to the study of the physical sciences. By Golding Bird, M. D. Lond. 1839.

—— 673, D. The same work. From the 3d Lond. edit. Philad. 1848.

Bontekoe, 164, D. Versche yde Tractætjes, handelende van de voornæmste Grondstukken om tot een wære Kennisse der Philosophie en Medicyne, etc. Door de Heer Cornelius Bontekoe, M. D. Gravenhage, 1687.

Boyle, 102, Q. The works of the Hon. Robert Boyle. To which is prefixed the life of the author. 6 vols. Lond. 1772.

Boyle, 614, O. The works of the Honourable Robert Boyle, Esq., epitomized. By Richard Boulton. 4 vols. With plates. Lond. 1699—1700.

Cavallo, 879, O. The elements of natural or experimental philosophy. By Tiberius Cavallo, F. R. S., &c. With copper-plates. 4 vols. Lond. 1803.

Delametherie, 656, O. De la nature des êtres existans, ou principes de la philosophie naturelle. Par J. C. Delametherie. Paris, 1805.

Elliot, 33, O. Elements of the branches of natural philosophy connected with medicine. By J. Elliot, M. D. Lond. 1786.

Ewing, 1097, O. A plain elementary and practical system of natural experimental philosophy; including astronomy and chronology. By John Ewing, D. D. With notes and a biographical sketch of the author, by Robert Patterson. Illustrated by plates. Philad. 1809.

Foxius, 111, D. Sebastiani Foxii Morsilii, Hispalensis, de naturæ philosophia, seu de Platonis et Aristotelis consensione, libri quinque. Lugdun. Batav. 1622.

Gibson, 294, O. Vol. VII. p. The principles, elements, or primary particles of bodies inquired into; and found to be neither those of the chymists or of the natural philosophers; but earth, water, air, fire, and frost. By John Gibson, M. D. Lond. 1772.

Gravesande, 113, D. Philosophiæ Newtonianæ institutiones, in usus academicos. Auctore G. J. Gravesande. Editio secunda. Leidæ et Amstelodami, 1728.

Haüy, 1158, O. An elementary treatise on natural philosophy. Translated from the French of M. R. J. Haüy, by Olinthus Gregory. 2 vols. Lond. 1807.

Imison, 1512, O. Elements of science and art; being a familiar introduction to natural philosophy and chemistry. By John Imison. Edited by Thos. Webster. 2 vols. Lond. 1808.

Lavoisier, 424, O. Essays physical and chemical. By M. Lavoisier. Vol. I. Translated by Thos. Henry, F. R. S. Lond. 1776.

Le Grand, 136, Q. Antonii le Grand institutio philosophiæ, secundum principia D. Renati Descartes. In usum juventutis academicæ. Editio quarta. Lond. 1680.

Natalis, 619, O. p. Plenum experimentis novis confirmatum. Auctore Stephano Natale, Societatis Jesu. Parisiis, 1648.

Nicholson, 1537, O. An introduction to natural philosophy. By William Nicholson. With plates. 4th edit. 2 vols. Lond. 1796.

Peart, 294, O. Vol. IX. p. On the properties of matter, the principles of chemistry, &c. By E. Peart, M. D. Gainsbrough, 1792.

Pringle, 115, O. Six discourses, delivered by Sir John Pringle, Bart., when president of the royal society; on occasion of six annual assignments of Sir Godfrey Copley's medal. With a life of the author by Andrew Kippis, D. D. Lond. 1783.

Reisch, 267, Q. Margarita philosophica. Auctore Gregorio Reisch. Argentorati, 1512.

Rohault, 39, D. Traité de physique. Par Jacques Rohault. Tomes 2. 4me édit. Lyons, 1681.

—— 622, O. Jacobi Rohaulti physica. Latine vertit, recensuit, et adnotationibus ex illustrissimi Isaaci Newtoni philosophia maximam partem haustis, amplificavit et ornavit Samuel Clarke, S. T. P. Editio quarta. Londini, 1718.

Rozier, 86, D. Observations sur la physique, sur l'histoire naturelle, et sur les arts et métiers. Avec des planches. Par M. l'Abbé Rozier. Tomes 6. Paris, 1771—1772.

—— 84, Q. Les mêmes continués, 1773—1792. Tomes 42.

Rumford, 703, O. Essays, political, economical, and philosophical. By Benjamin Count of Rumford. 5th edit. With plates. 3 vols. Lond. 1800.

Saumarez, 1559, O. Principles of physiological and physical science. By Richard Saumarez. Lond. 1812.

Webster, 1495, O. Elements of mechanical and chemical philosophy. By John Webster. Taunton, 1804.

Whewell, 2600, O. Bridgewater Tr. III. Astronomy and general physics considered with reference to natural theology. By the Rev. William Whewell, A. M. Lond. 1834.

Wilkinson, 561, O. Physiological and philosophical essays. By C. H. Wilkinson. Lond. 1798.

619, O. Physica vetus et nova. Parisiis, 1648.

324, Q. Philosophical collections, containing an account of mathematical and philosophical experiments, &c. No. 1 to 7 (inclusive). Lond. 1679—1682.

482, Q. Smithsonian contributions to knowledge. Washington, 1848—1856. 8 vols.

II. WORKS ON PARTICULAR DEPARTMENTS OF NATURAL PHILOSOPHY.

(A.) MECHANICS AND HYDRO-DYNAMICS.

Bayle, 123, D. Vol. III. Quare quidam liquores in tubis exilioribus contra insitam gravitatem ascendant. *Ext. in* Dissert. physic. Auct. Franc. Bayle, M. D. Hagæ-Comitis, 1678.

Bridge, 1425, O. A treatise on mechanics; intended as an introduction to the study of natural philosophy. By B. Bridge. Lond. 1814.

Calkoen, 92, Q. p. Dissertatio philosophica inauguralis; sistens observationes quasdam hydraulicas. Auctore Nicolao Calkoen. Trajecti ad Rhenum, 1772.

Draper, 474, Q. Memoirs on capillary attraction, chemical action of light, &c. Append. to Treatise on the organization of plants, by J. W. Draper. New York, 1845.

Fannius, 22, F. Tom. II. Q. Rhemnii Fannii de ponderibus et mensuris liber. 1567. *Ext. in* Med. Art. Princip.

Mechain, 278, Q. Base du système métrique décimal. Par MM. Mechain et Delambre. Tomes 3. (Suite des Mémoires de l'Institut.) Paris, 1806—1810.

Pringle, 115, O. On the attraction of mountains. *Ext. in* Sir John Pringle's discourses. Lond. 1783.

Priscien, 3083, O. Poésies de Priscien. Les poids et mesures, etc. Trad. en Français par E. F. Corpet. (Bibliothèque Latine-Française.) Paris, 1845.

(B.) PNEUMATICS.

Brook, 73, Q. Miscellaneous experiments and remarks on electricity, the air-pump, and the barometer. By A. Brook. Norwich, 1789.

Cavallo, 69, Q. A treatise on the nature and properties of air, and other permanently elastic fluids. To which is prefixed, an introduction to chemistry. By Tiberius Cavallo. Lond. 1781.

Peart, 294, O. Vol. IX. p. On the properties of matter, the principles of chemistry, and the nature and construction of aeriform fluids or gases. By E. Peart, M. D. Gainsbrough, 1792.

Pringle, 115, O. On the theory of gunnery. *Ext. in* Sir John Pringle's discourses. Lond. 1783.

Sanden, 616, O. Vol. II. p. Tentamen inaugurale, de atmosphæræ natura et effectibus quibusdam. Auctore Thoma Sanden. Edinb. 1774.

Wilson, 1624, O. p. On light and on air. By Andrew Wilson, M. D. Lond. 1776.

(C.) ACOUSTICS AND OPTICS.

Bayle, 123, D. Vol. III. Dissertatio. An in hypothesi Cartesii lux consistat in solo nisu globulorum cœlestium ad motum. Auctore Francisco Bayle, M. D. Hagæ-Comitis, 1678.

—— 123, D. Vol. III. Dissertatio de refractione. Auct. Fr. Bayle, M. D. Hagæ-Comitis, 1678.

Bompass, 1689, O. Essay on the nature of heat, light, and electricity. By Chas. C. Bompass. Lond. 1817.

Crisp, 494, O. Observations on the nature and theory of vision; with an inquiry into the cause of the single appearance of objects seen by both eyes. By John Crisp. Lond. 1796.

Draper, 474, Q. Memoirs on capillary attraction, electricity, and the chemical action of light. *Ext. in* J. W. Draper's Treatise on the organization of plants. New York, 1845.

Elliot, 294, O. Vol. XIX. p. Philosophical observations on the senses of vision and hearing, and on harmonic sounds; also, an essay on combustion and animal heat. By J. Elliot. Lond. 1780.

Elliot, 575, O. p. The same.

Higgins, 506, O. A philosophical essay concerning light. By Bryan Higgins, M. D. Vol. I. Lond. 1776.

Le Cat, 71, O. A physical essay on the senses. Translated from the French of M. le Cat. With plates. Lond. 1750.

Logan, 1673, O. Demonstrationes de radiorum lucis in superficies sphæricas remotus ab axe incidentium a primario foco aberrationibus. Auctore Jacobo Logan, Pennsylvaniensi. Lugd. Batav. 1741.

Priestley, 30, Q. The history and present state of discoveries relating to vision, light, and colors. By Joseph Priestley, F. R. S. 2 vols. Lond. 1772.

Togno, 2524, O. p. A popular essay on the laws of acoustics, &c. By Jos. Togno, M. D. Philad. 1834.

Wilson, 1624, O. p. Four letters on the materiality, density, and activity of light; and on air. By Andrew Wilson, M. D. Lond. 1776.

(For works on the Anatomy and Physiology of the Ear and Eye, *Vid.* pp. 29 and 110.)

§ *Optical Instruments.*

Beale, 3594, O. The microscope and its clinical application to medicine. By Lionel Beale, M. B. Lond. 1854.

Carpenter, 785, D. The microscope, and its revelations. By Wm. B. Carpenter, M. D. Lond. 1856.

Griffith, 3700, O. The micographic dictionary; a guide to the examination and investigation of the structure and nature of microscopic objects. By J. W. Griffith, M. D., and A. Henfrey, F. R. S. With plates. Lond. 1856.

Mandl, 3085, O. Traité pratique du microscope. Par le Dr. L. Mandl. Paris, 1839.

Pringle, 115, O. On the reflecting telescope. *Ext. in* Sir John Pringle's discourses. Lond. 1783.

Quekett, 3229, O. A practical treatise on the use of the microscope, including the different methods of preparing and examining animal, vegetable, and mineral structures. By John Quekett. Illustrated with plates and engravings. Lond. 1848.

Robin, 3646, O. Du microscope et des injections, etc. Par le Dr. Ch. Robin. Avec planches. Paris, 1849.

Schacht, 786, D. The microscope, in its special application to vegetable anatomy and physiology. By Dr. Hermann Schacht. Translated by Fred. Currey, M. D. With illustrations. Lond. 1853.

Smee, 3575, O. On the stereoscope and binocular perspective. By Alfred Smee, F. R. S. Lond. 1854.

Trigt, 3805, O. p. Der Augenspiegel, seine Anwendung und Modifikationen, &c. Nach dem Holländischen des Dr. von Trigt mit Zusätzen bearbeitet von Dr. C. H. Schauenburg. Lahr, 1854.

(D.) CALORIC.

Bellegingue, 682, O. p. Réfutation du calorique et notions naturelles sur la chaleur et le froid, la fluidité et la dureté, &c. Par Pierre Bellegingue, M. D. Besançon, 1800.

Bompass, 1689, O. An essay on the nature of heat, light, and electricity. By Charles C. Bompass. Lond. 1817.

NATURAL HISTORY.

I. GENERAL AND COLLECTIVE WORKS ON NATURAL HISTORY.

Albertus, 259, D. De virtutibus herbarum, lapidum et animalium libellus. Item de mirabilibus mundi, de falconibus, etc. Auctore Alberto Magno. Tomi 2. 48vo. Lugd. Batav. 1596.

Albinus, 11, Q. B. S. Albini academicarum annotationum libri VIII. (Continent anatomica, physiologica, zoographica, phytographica, etc.) Cum figuris. Tomi 2. Leidæ, 1754—1768.

Bacon, 29, F. Francisci Baconi, Baronis de Verulamio, opera omnia. Tomi 4. Or the works of the Lord Bacon in 4 vols. Lond. 1730.

Baglivi, 35, Q. Opera omnia Georgii Baglivi. Lugd. 1745.

Barton, 822, O. p. A discourse on some of the principal desiderata in natural history, and on the best means of promoting the study of this science in the United States. By Benjamin Smith Barton, M. D. Philad. 1807.

Blumenbach, 1918, O. A manual of the elements of natural history. By J. F. Blumenbach. Translated from the German by R. T. Gore. Lond. 1825.

—— 2607, O. p. Abbildungen naturhistorischer Gegenstände; herausgegeben von Joh. Fried. Blumenbach. No. 1—10. Göttingen, 1796.

Bonannius, 101, F. Rerum naturalium historia nempe quadrupedum, insectorum, piscium, etc. etc., existentium in museo Kircheriano, edita jam a P. Philippo Bonannio; nunc vero nova methoda distributa, etc. a Joh. Ant. Battarra. Tomi 2. Romæ, 1773 et 1782.

Bonnet, 610, O. Contemplation de la nature. Par Ch. Bonnet. Tomes 3. Hambourg, 1782.

—— 1318, O. Œuvres d'histoire naturelle et de philosophie de Charles Bonnet. Tomes 2. (Contenant observations diverses sur les insectes.) Amsterdam, 1780.

Buffon, 146, D. Histoire naturelle générale et particuliere. Par M. le Comte de Buffon. Tomes 43. Aux deux-ponts, 1785—1787.

—— 1783, O. Œuvres complètes de Buffon, mises en ordre, précédées d'une notice sur la vie de l'Auteur, et suivies d'un discours sur le progrés des sciences naturelles depuis le milieu du dernier siècle par M. le Comte de Lacepède. Tomes 12. Paris, 1817—1818.

Carpenter, 785, D. The microscope and its revelations. By William B. Carpenter, M. D. Lond. 1856.

Chaisneau, 123, F. Atlas d'histoire naturelle ; ou collection de tableaux relatifs aux trois règnes de la nature. Par Charles Chaisneau. Paris, 1802.

Cuvier, 2366, O. Histoire des progrès des sciences naturelles, depuis 1789, jusqu'à ce jour. Par M. le Baron Cuvier. Tomes 4. Paris, 1826 à 1829.

—— 2367, O. Rapport historique sur les progrès des sciences naturelles depuis 1789, et sur leur état actuel, présenté au gouvernement le 6 Février 1808. Rédigé par M. Cuvier. Paris, 1827.

Delamethrie, 656, O. De la nature des étres existans. Par J. C. Delamethrie. Paris, 1805.

Duméril, 1344, O. Traité élémentaire d'histoire naturelle. Par A. M. Constant Duméril. 2de édit. Tomes 2. Paris, 1807.

Edwards, 1334, O. Essays upon natural history, and other miscellaneous subjects. By George Edwards. To which is added, a catalogue, in general order, of the birds, beasts, fishes, insects, plants, &c. contained in Mr. Edwards' natural history. Lond. 1770.

Falconer, 119, Q. Miscellaneous tracts and collections relating to natural history, selected from the principal writers of antiquity on that subject. By W. Falconer, M. D. Cambridge, 1793.

Forster, 1378, O. Enchiridion historiæ naturali inserviens, quo termini et delineationes ad avium, piscium, insectorum et plantarum adumbrationes intelligendas et concinnandas, secundum methodum systematis Linnæani continentur. Editore Jo. Reinholdo Forster, M. D. Halæ, 1788.

Fothergill, 321, D. An essay on the philosophy, study and use of natural history. By Charles Fothergill. Lond. 1813.

Fourcroy, 30, O. Elements of natural history and of chemistry. By M. De Fourcroy. Translated into English ; with occasional notes, and an historical preface by the translator, and a supplement carefully extracted from the edition of 1789. 5 vols. Lond. 1788—1789.

—— 320, O. The same work. Translated from the 3d French edition. 3 vols. Lond. 1790.

—— 430, O. The same work. Translated from the 4th French edition. By R. Heron. 4 vols. Lond. 1796.

—— 1466, O. The same work. 5th edit. With notes, by John Thomson. 3 vols. Edinb. 1800.

Gibbons, 2523, O. The advocate of science and annals of natural history. Conducted by W. P. Gibbons. Philad. 1834.

Good, 1912, O. The book of nature. By John M. Good, M. D. 3 vols. Lond. 1826.

Graves, 1732, O. The naturalist's companion ; being a brief introduction to the different branches of natural history. By Geo. Graves, F. L. S. Lond. 1824.
